FOR IMMEDIATE RELEASE

***FLEXON, INC. INTRODUCES COST EFFECTIVE HOOD  
FOR SPEED-MASTER® HIGH PERFORMANCE DOORS***

Flexon, Inc. now offers a more economically priced weather hood for use with their Speed-Master® high performance roll-up doors.

The new hood is a light-duty metal weather hood, and is utilized as an accessory on Speed-Master® high-speed roll-up doors that are installed on the exterior side of a building. This light-duty, low-cost hood has a sloped top and is designed for effective protection of the Speed-Master® roll and motor from weather in geographical areas where snow loads are unlikely. In addition, it is available in any width, and is shipped in multiple sections, which makes the hood easy to handle and install. For Speed-Master® doors installed on the exterior side of a building in areas where snow-loads and severe weather are a concern, Flexon recommends their conventional heavy-duty metal weather hood. The heavy-duty hood is designed to accommodate more weather and snow-loads.

Flexon, Inc. manufactures high performance doors for industrial, food processing, pharmaceutical and transportation markets.
