FOR IMMEDIATE RELEASE

***FLEXON, INC. REINTRODUCES REINFORCED DOOR MATERIAL
Blackflex™ & Clear Reinforced Materials Back By Popular Demand***

In the fourth quarter of 2006, Flexon, Inc. reintroduced Blackflex™ and Clear Reinforced Flexidoor® panel materials.

The original Blackflex™ and Clear Reinforced PVC panel materials, which were unavailable for a few years, have the same anti-stretch quality that originally made them popular. This flexible panel material is a signature component of Flexon's popular Flexidoor® Series Model HD and CSR impact traffic doors. The combination of these heavy-duty impact door panel materials with Flexon's exclusive torsion spring panel closing mechanism is what makes Flexidoor® impact doors capable of withstanding the abuse associated with motorized traffic.

Available on both new Flexidoors and as replacement panels for existing installations, the Blackflex™ and Clear Reinforced panel materials are a heavy-duty, cost-effective choice for impact door installations in food processing, baking and industrial applications.

Flexon, Inc. manufactures high performance doors for industrial, food processing, pharmaceutical and transportation markets.
