HÖRMANN FLEXON QUALITY SPIRAL DOOR

Hörmann Flexon LLC will show their new security spiral door featuring state of the art high-speed spiral technology in April 2008 at the International Door Association Expo 2008 in Las Vegas, Nevada, USA.

The high-speed spiral door is designed to provide modern business operations with a state of the art door system. Designed for use on interior or exterior openings up to 20'0" wide, the unmatched opening and closing speeds of this door will enhance building security and promote continuous workflow. Composed of aluminum sections with thermal section breaks, the door panel securely rolls up onto a spiral bracket. The thermal breaks provide a superior R-value for maximum energy-efficiency, and the robust door panel offers maximum protection from unauthorized access. In addition, synthetic hinge connectors create an ultra-quiet door operation, enhancing comfort in the workplace.

Hörmann Flexon LLC manufactures a complete line of industrial door and dock products including the Speed-Master® Series of high performance, high speed roll-up doors; Flexidoor® Series of impact doors; Flexidock® loading dock equipment and Screen-Master® insect control barriers.
