

Speed-Commander™ Series 1400 SE and 800 SF For Interior Doorways

The unique SoftEdge profile and self-repairing design provide a state-of-the-art door system.

Damage Control

In case of a collision, the flexible panel breaks out of the tracks without damage so that costly repairs are avoided. Full perimeter draft seals and fast opening speeds of up to 100" per second on the Model 1400 SE and 80" per second on the Model 800 SF enhance energy savings.

Vertical Flexibility

The vertical flexibility of the soft bottom profile minimizes damage to goods and greatly reduces the risk of injury to personnel, for peace of mind in demanding high-traffic areas. The Speed-Commander™ 1400 SE features a special SoftEdge profile which includes a panel reversing edge and photocell.

Horizontal Stability

The horizontal stability provides a smooth door operation and supports the overall strength and appearance of the door. Speed-Commander™ doors are some of the lowest profile doors available, fitting into the most restricted applications.
