

FLEXON SERIES 100 FIXED HEAD PAD DOCK SEAL

"Control Your Environment"

The Flexon Series 100 fixed head pad dock seal compresses and forms a positive seal between the building and the trailer. Standard over-the-road and straight trucks can be easily sealed for safety and environmental control during loading and unloading. Fixed Head Pad Dock Seals are the ideal solution for dock door openings up to 9'0" high.

SERIES 100 STANDARD FEATURES:

- * Several cover materials for light, medium and heavy-duty applications: 22 oz and 40 oz vinyls; Bulldog high-tear vinyl; 40 oz Hypalon® and our exclusive Flexilon-S® high tear Hypalon®.
- * Standard color: Black.
- * High visibility yellow guide stripes 4" wide X 24" high.
- * Pressure treated wood backboards.
- * Warranty: One year materials and workmanship.

OPTIONAL FEATURES:

- * Patented 102® side pad wedge with unique 6" wide X 24" high dual yellow and orange guide stripes designed to accommodate 96" and 102" wide trucks respectively. The special wedge shape reduces the amount of foam and material exposed in the door opening while the seal is compressed, increasing dock seal life.
- * Exclusive "Security-Seal" helps reduce theft. The head and side pads are wrapped in PVC coated chain link fence and covered by high tear vinyl material. This eliminates cutting of the seal from the inside or outside.
- * Full height high visibility yellow guide stripes.
- * Fire retardant cover material and foam.
- * Galvanized steel backing instead of wood.
- * Wedged head pad and drop flap for variable truck height applications.
- * Extended projections and wood block-outs.
- * Tapered projections for sloped driveways.
- * Wear pleats for added protection on the face of the side pads and corners of the head pad. Overlapping flaps of material sewn to the base layer of material allowing upward movement on the face of the seal. Wear Pleats in a variety of materials and exposures.
 - WP-16 Exposure 16", Overlap 2", Overall 18".
 - WP-8 Exposure 8", Overlap 10", Overall 18".
 - WP-4 Exposure 4" Overlap 5", Overall 9".
- * Wear faces provide more durability by adding an extra layer of fabric to the inside and face of the pads.
- * Common member side pads for applications having limited mounting surface between dock door openings.
- * Bottom pads seal the gap between the building foundation and the trailer floor.
- * Galvanized Steel weather hood.
